I am in favor of this project but as usual the incompetence of the APA is evident. According to the map I received with the letter none of the treatment area is in the Town of Belmont It is in the Town of Ellenburg. Either the map is wrong or the description is incorrect. Please learn how to read a map or describe the area being treated correctly.

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

I am not in favor of the use of this herbicide treatment. The area in which they are planning the treatment is upstream from my home. The waterflow goes from the proposed location right through my area and to the dam. Furthermore, there is a jut out by my property which means i'm likely to have residual effects linger in that area. We have a lot of ducks, otters, geese and other wildlife that use our lake and besides the effects on my swimming and drinking water, i am concerned about the effects to them. While i understand that the treatment seems to be effective in treating milfoil, i don't believe we fully know what else is affected by this herbicide. Thank you for your consideration.

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

We are long time residents at Chateaugay Lake and love the peace and serenity of the lake and the Adirondack mountains around it.

It depresses our whole family, grandparents, children and grandchildren, that despite our best efforts the milfoil problem has gotten exponentially worse. Money for hand harvesting and using mats over the last fifteen years has had little effect and creates an ongoing financial burden with poor results. The milfoil is a dozen times denser than when we started.

We are absolutely in favor of using of using ProcellaCor EC and hope we can raise enough funds to treat all of the badly infested parts of Chateaugay Lake.

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

The beautiful lake has been dying over the years. I have been here since 1998 and the change in the lake is tragic. You can kayak for 30 minutes and pick up a kayak full of milfoil from the floating masses of it. The loon count has diminished alarmingly. A pristine lake has been totally overwhelmed and the growth rate of milfoil is startlingly alarming!

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

My beach area until 2 years ago was 97% free of vegetative aquatic growth. Last summer, 2023, 50% of the swimmable area was infested with underwater vegetation !!! Not very enjoyable and an obstacle for enjoyment by our young grandchildren. I have seen a dramatic change in only 2 years, I'd hate to imagine what it will be like , if drastic measures are not taken, 2 years hence !

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

I support the use of the aquatic herbicide ProcellaCor EC to eradicate eurasian milfoil in Chateaugay Lake. The lake is overrun with this invasive aquatic plant to the point that hand harvesting is ineffective, and our lake residents cannot afford this ineffective method.

Treating one part of the lake is a concern. The whole lake that's less than about 15 feet deep needs help. This awful plant has now created a veritable forest throughout most of the lower lake where our camp is. It hangs up on kayaks, props, paddles, swimmers, and washes up in bushels onto our small beach area every day.

Please approve ProcellaCor EC for Chateaugay Lake.

My Comments:

As a property owner on Upper Chateaugay Lake, I am strongly in favor of the use of ProcellaCor EC to protect my lake and combat the invasive species Eurasian Milfoil.
I would also be in favor of placing restrictions or fees for use of the public boat launch. Invasives are being introduced to the lake via public access. The public should, at the very least, have to pay a fee that could be used to support the maintenance of the lake.

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

I believe this herbicide is the only way to rid Châteaugay Lake of the Eurasian Milfoil. I was on the board of the CLF for 11 years. We tried other methods to get rid of the milfoil to no avail. It just kept spreading. Please approve the application to use the herbicide.

My Comments:

I think it is a good approach and in the long run will be more effective and less costly. Of course the best step is to close the boat launch or limit it's use to residents of the lake which isn't going to happen.

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

I support the pilot project to treat the Eurasian Milfoil with ProcellaCor. My one concern is that our camps that are located near the base of the sand bar use lake water for bathing and washing dishes. Some clear guidelines of when it may be advisable for us to reduce or restrict our lake water use would be helpful.

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

Our camps lie near the base of the sandbar facing both the upper lake and the north side of the sandbar. Because we use the lake water for bathing, washing hands and washing dishes and clothes, we have several concerns:

1. It would be important for us to know expected dates of the application well in advance, preferably at least one month prior, to help in our planning for use of the camps.
2. Please advise of any appropriate precautions we should observe during application of the product and for how long afterward.
3. On a daily basis a substantial amount of plant material washes up onto our beaches. How should we dispose of such plant matter that has been treated?

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

I reside in York, PA. I own the lot at 556 Lake Road and thus, have a vested interest in the health of both Upper and Lower Chateaugay Lake.

I wholeheartedly endorse Chateaugay Lake Foundation's Eurasian watermilfoil abatement plan using ProcellaCor EC. Since purchasing the property on Lower Chateaugay, I've been donating to the foundation annually to limit milfoil's takeover of the lake. As the manual removal of milfoil has not slowed its progress, more aggressive steps must be taken. ProcellaCor has been shown to work in other lakes both inside and outside the Adirondacks - it's time to use it in Chateaugay.

Thanks,
--David Ehrlich

My Comments:

As Town Supervisor for Belmont, NY, I would like to lend my support to the effort being made by the Chateaugay Lake Foundation to address and fight the spread of the invasive watermilfoil. This is a challenging task and an exhausting endeavor however, this group has proven to be formidable in their attempts to combat the spread of this invasive species.

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

As a property owner on Upper Chateaugay Lake, and a long term visitor to the lake, I write in support of the application by the Chateaugay Lakes Foundations for the application of ProcellaCOR as proposed. I have been coming to the Lake since 1962. It was a pristine lake with natural resources that are incomparable in the Adirondacks. It is with sadness that over the recent years with the introduction and intrusion of Eurasian Milfoil, I have watched the lake get choked with the weed. As one who canoes the shores and inlets of the Lake, I am too familiar with getting my paddle caught with the invasive. I am aware of the work of the CLF (also a past board member) and I have supported the hand pulling they have done to try to contain the spread of the weed. I know it won't work and eventually without a more aggressive approach the weed will take over more and more of the Lake. I have read about ProcellaCOR and attended presentations about it as well. I am convinced that the risks are small and the potential gain is great. I do not need to reiterate what has already been presented in the proposal. I do hope that the Agency will approve of this initial step to giving us hope of a remedy to the invasion of Eurasian Milfoil.

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

I am AGAINST the application of ProcellaCor EC in the Chateaugay lakes. I swim in and drink the lake water and I don't feel we have enough knowledge as to the long-term effects of this herbicide since it has only been in use for a very short time. I do not want to end up as the 'lab rat' to determine what negative side effects might be found down the road.

The milfoil problems in the lake are only aesthetic and I am not willing to risk my health for such a minor nuisance.

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

I have been an observer and donor to Chateaugay Lake's Eurasian water milfoil control project since it started in 2007. I have seen that despite consistent annual hand-harvesting, the milfoil has persisted in the harvested areas and has continued to spread. It has reached a level of wide-spread infestation that is affecting water quality and enjoyment of the lake. The herbicide ProcettaCOR EC has been deemed safe for use per government approved testing and has been effective in reducing milfoil significantly where it has been tried in other lakes. I support the use of ProcettaCOR as a more cost-effective option to help bring the Eurasian water milfoil under control and protect the health of Chateaugay Lake.

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

I am in full support of this project, as I have researched the risks and feel it is imperative that we do it to keep the lake healthy and swimmable. My family has owned property on the west side of the Upper Lake for over 50 years, and we are extremely upset with the rise of milfoil, including right off our shore. We are hopeful that this will significantly curb the invasion, thus keeping a healthy lake environment.

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

I strongly support the application by the Chateaugay Lakes Foundation to apply the Procella herbicide to control the explosive growth of milfoil in our lake system. The Foundation has made serious efforts using other methods of trying to control the milfoil that have ultimately not been effective. The milfoil continues to choke our waterways and threatens the diverse South Inlet which is home to many species of birds, fish and other wildlife. Thank you for your consideration of this issue.

My Comments:

I fully support approval of this permit request. I am on the board of the Chateaugay Lake Foundation, which has been fighting milfoil on Chateaugay Lake for 15 years. We are losing the battle with traditional control methods. ProcellaCOR EC is safe and offers a new tool for us to try and save our lake. I request you recommend approval of the permit request. Thanks for your consideration. Regards,
David Kemp

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

Milfoil has been a constant problem that has only gotten worse. I have owned the property since 1985. Hand harvesting has not stopped the spread so something else is needed. At this point the infestation is so intensive in areas that has never been hand harvested that only something like a chemical is the only possible chance of containing the milfoil and reducing it.

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

Aaron, thank you for the opportunity to comment. I own a house on Chateaugay Lake Narrows and have seen the impact that milfoil has had on the lake. Despite several years of harvesting by hand the milfoil has spread substantially. I support the foundation's application to apply ProcellaCor EC as specified. The Safety Data Sheet suggests the risk of human exposure is relatively low and EPA and state certifications are reassuring. I believe it is worth trying and seeing how effective it will be in this situation. Any questions, please feel free to contact me. Thanks again. Alan Liptak

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

I think this a great idea. After other areas have used this with positive results. TheCLF has done an amazing job to research this process. It's not for lack of trying. Hand harvesting just could not keep up with the rapid spread invasive plants. If the hand harvesting didn't happen the narrows would have choked off. The CLF has a great plan on how to do this. This could be done faster if they could get state and federal funding. This lake has a great tax base to the towns and also a large volume of day use boaters. I'm sure there are funds available to put in the budgets to help with this. Process. Thank you for your time. I come to you as A land owner and the president of the chateaugay lake association. Thanks again. Jeff manley

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

The Chateaugay Lakes Association (CLA) has supported the Chateaugay Lake Foundation since its inception and the pursuit of Eurasian milfoil reduction projects. The support includes annual financial contributions to these efforts. The CLA board is made up of lake owners dedicated to the protection, preservation and recreational use of the Chateaugay Lake - or the lakes: The Upper, Narrows and Lower lake as frequently referenced by maps and the local communities. We have supported all past milfoil projects and support the planned use of the aquatic herbicide ProcellaCOR EC starting in 2024. Steve Matteson CLA VP and Board Member.

My Comments:

We have had a summer cottage on Upper Lake Chateaugay since 1953 and thus have witnessed firsthand the spread of milfoil in the lake.
We fully support the effort to identify a solution to this problem by experimenting with ProcellaCor or any other safe biochemical agent and hope that you approve a trial this summer.

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

This is so important to keeping our lake clear of an invasive species that left unmanaged will overtake and ruin this beautiful lake in NY. Unfortunately, many lakes and rivers are unprotected and have been polluted and overwhelmed by invasive plants and species that are not native to our area or in many cases our country. We must take better care of our waters as they are precious to all humans and animal that need them for life. Please consider this project as very necessary to keeping this lake open and clear to be used and enjoyed by all.

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

We have had a camp on the Chateaugay Lake Narrows since 1977. Over that time we have witnessed the expansion of Eurasian Milfoil despite control efforts undertaken by diverse interested parties. It has been costly and largely ineffective. This invasive, non-local weed is harming the enjoyment of our lake. For example, there are areas that once were swimmable but no longer are and canoeing through weed-infested areas is arduous - and sometimes impossible. Something must be done or we could risk losing the enjoyment of one of the finest lakes in the Adirondack Park.

Re: Agency Project 2024-0090, Chateaugay Lake Foundation

My Comments:

I have been on Upper Lake for 60 years and have watched as milfoil has proliferated and choked the south and west inlets and the entire south west corner of the lake. In the last few years I have started to see milfoil off the end of my dock and I am on the east side directly across from Indian Point. I fully support using ProcettaCor EC to control and ultimately remediate milfoil in Chateaugay Lake and therefore fully support this trial. I also advocate that to pay for it there be a levy on ALL users of the lake to help pay for the trial and the longer term treatment. It's extremely frustrating that it isn't owners of lakefront property that are exacerbating the problem and very few of the lake boats are used on any other body of water. Further when I see someone ripping through an indicated milfoil bed I doubt very much it's a propriety owner. Our taxes are high enough and while I am prepared to pay to solve the problem so should others who use the lake.

Hello-

I am in support of this project. I own two properties in the town of Bellmont, a residence and a camp. As a taxpayer as well as a recreational user of Chateaugay Lake, I feel ProcellaCor EC is the best and most cost-effective solution to the Eurasian watermilfoil issues that have decimated our lake.

Thank you,
Kurt Taylor

Dear Mr. Ziemann,

I am writing to let you know that even though many have jumped on the bandwagon to support the use of ProcellaCor EC, I am not. I know the push to get rid of milfoil is real and I support that push, I think we need a non-chemical approach. We do not know the long term implications of this treatment and that is a scary predicament for me.

I wish we could try other treatments, such as vacuum suctioning, before being railroaded into this.

A concerned lake owner,

Mary Fitzgerald

ATTENTION: This email came from an external source. Do not open attachments or click on links from unknown senders or unexpected emails.

As a waterfront property owner on Upper Chateaugay Lake, I write to support this project. I consider Eurasian milfoil to be a serious threat to the ecology of the whole Lake system, as well as to my property value, and I am persuaded that ProcecellaCor EC seems to represent a reasonable response to the problem. I have supported the Chateaugay Lakes Foundation in their hand harvesting projects for years, and that approach seems to be futile in the long run.

I am pleased that the project will be proceeding in phases, and I hope that a careful analysis will be studied of the effects of the first phase on the Lakes ecology before the treatment project will be expanded to the whole Lakes system. We do not drink or cook with Lake water, so our only concerns would be the effects of ProcellaCor on skin contact, on wildlife, and on native plant life.

Sincerely,

Howard S. Miller

Mr. Ziemann -

I strongly oppose this project. From a financial perspective, a project of this nature is completely unsustainable for our community and a waste of time and money.

In addition, I understand the optimal conditions for ProcellCor EC require an environment with minimal current. Given the active current in Chateaugay Lake, the dispersion of this chemical is like to occur extensively throughout the lake.

Thank you,
Bill Fitzgerald

I totally support anything that can be done to protect Chateaugay Lake from milfoil. Our family has enjoyed the lake since 1916 and the changes have been very obvious. Our association has been doing all they can to deal with the problem, but any help we can get to mitigate or solve the problem would be greatly appreciated.

Dear Mr. Ziemann,

I am commenting on the proposed herbicide treatment of Eurasian milfoil in the Chateaugay Lakes system.

While I thoroughly support the aim of this project and the method (herbicide treatment) I cannot support the project in its current form. For years there has been mechanical harvest of milfoil around the boat launch and in the Narrows. The rationale given for these locations was that the current in the lake system would keep milfoil from returning to these "upstream" locations. It appears the currently proposed herbicide project is using the same faulty logic.

My wife and I own property on the lower end of Lower Chateaugay Lake where several large infestations of milfoil have developed over the past few years. On a regular basis personal watercraft and pleasure boats zip about over these milfoil beds at high speed, then return up the lake into the Narrows. I have personally witnessed a "crumb trail" of shredded milfoil in their wake.

Until the resources are available to treat the entire lake system, I fear money spent on limited treatments (like the one proposed) is simply wasted. Given the extensive boat traffic back and forth between heavily infected areas that won't be treated and the treatment area, milfoil will quickly reestablish itself in the treatment area after any residual effect of the herbicide has disappeared.

I'd love to see our lake system rid of milfoil and believe herbicidal treatment is the only sensible alternative. But a piecemeal approach is unlikely to be effective.

Thanks for your consideration.

Hi, Mr. Ziemann—

Sorry, but I was getting error messages with the automated form, so am emailing the PDF.

Bottom Line: I strongly support the subject project.

Thank You,
James Dwyer

I approve of using ProcellaCOR EC in Chateaugay Lake to stop the spread of milfoil. Harvesting has been attempted throughout the years to no avail.

Dear Mr. Zierman,

I have tried to submit these comments via the form on the website (<https://apa.ny.gov/Hearings/ApaCommentPopup.cfm?ProjectNumber=2024-0090>), but when I click on "submit", I am sent to a page that says "Error 403. Please check this as I believe others may try to comment via this link.

I wholeheartedly support project 2024-0090 for the application of PrecellaCor EC to control--ultimately to effectively eradicate--Eurasian watermilfoil from the Chateaugay Lakes. This invasive species is highly detrimental to both the recreational quality and ecological health of the lakes. Other methods of control have proven both cost prohibitive and ineffective. PrecellaCor EC has been proven to be effective in killing Eurasian Milfoil with zero negative consequences to any other living organism.

I own close to 900' of shoreline on Upper Chateaugay Lake. The areas in front of my property that are of proper depth to support Eurasian Milfoil are increasingly choked with it. Soon they will be difficult to navigate by boat. Already they are unpleasant for swimming. Thus, the quality of my life on the lake is deteriorating due to the milfoil scourge. Soon my property value will suffer as well.

My only concern with the current application is the piecemeal approach to dealing with the problem. It is my strongest hope that if the initial applications of PrcellaCor prove effective with, as expected, no negative effects to any other species, that the program will be modified to allow for treatment of the entirety of the Chateaugay Lakes (Upper Lake, Narrows, and Lower Lake) simultaneously. I fear that the current approach will allow for re-establishment of the species in previously treated beds as bits of plants from the untreated areas will be transported by currents, winds, and motorboats to treated areas.

Thank you for consideration of my views.

We are property owners with about 400 feet of lakefront on Upper Chateaugay Lake. We strongly favor the ProcellaCor EC strategy for controlling milfoil on the lake, having seen the immense amount of money and effort that have been expended so far on controlling it, with apparently no significant reduction in extent and density of the infestation.

We cannot emphasize enough how important this is to the aquatic health of the lake and of its recreational value. Without some form of effective management, the lake will succumb to a messy end.

If this treatment does not work -- and we believe based on reports from other contexts that it will -- we will advocate for severe limitations on the use of watercraft not based on the Chateaugay lakes and other measures. We require strong action to control this problem. ProcellaCor EC seems to be the most reasonable approach at the moment. Let's give it a chance.

Dear Mr. Ziemann,

I want to let you know that I am not in agreement with the dispersion of ProcettaCor EC in Chateaugay lake. From what I have learned, I just don't think the long term effects of this have been explored enough...it really is a mystery if this will have long term negative effects.

We think suction vacuuming is a better alternative at this time.

Sincerely,

Mary Fitzgerald

I am writing as the founder and President of the Chateaugay Lake Foundation to provide background on our decision to pursue the use of ProcettaCOR EC to treat Eurasian water milfoil in Chateaugay Lake and why we feel it is so important to have this option available to us.

Eurasian water milfoil (EWM) has been present in Chateaugay Lake since at least the 1970s, when a troublesome plant was observed to be spreading in the vicinity of the DEC public boat launch. It was positively identified as Eurasian water milfoil by Professor John Peverly of Cornell University, who visited the lake in 1979. He reported that there were aquatic plant “trouble spots” in the north part of both the upper and lower lakes and in the narrows, and that “practically all of this plant problem is Eurasian water milfoil . . .”.

Over the next couple of decades there were two deep draw-downs for dam repair, which may have helped keep the EWM in check. In 2002, a lake wide aquatic plant survey by Cedar Eden found EWM present in about 40 acres, 3 percent of the shoreline littoral zone. In 2006, the Adirondack Watershed Institute was engaged to re-survey for EWM and to develop a management plan. The milfoil had spread to infest 200 acres, 14 percent of the littoral zone.

The recommended management plan was a combination of hand-harvesting and placement of benthic mats in high-traffic areas. The projected cost to carry out a whole-lake control program over three years to reduce the EWM to “maintenance” levels was \$1.5 million. There was no local government capacity to undertake such a program, which would have required state legislative action and agreement among the three surrounding rural townships to form an aquatic weed control tax district. A more limited phased control plan was adopted that would focus on priority sites that were sources of spread, with the intent of ramping up over time. The Chateaugay Lake Foundation was formed by concerned lake area residents to raise funds and spearhead the effort.

Milfoil control began in 2008 with hand-harvesting and placement of benthic mats at the DEC boat launch site. The benthic matting was not effective and was stopped after three years, but hand-harvesting has continued annually. Some \$700,000 has been spent on control over 17 years, averaging about \$41,000 annually. This has allowed about six weeks of hand-harvesting each year, focusing on the four priority sites initially identified. It has not been possible to ramp up the program to cover more of the shoreline. The milfoil has continued to spread, and a 2021 lake wide aquatic plant survey found that it was present in 695 acres of the shoreline waters, 48 percent of the littoral zone.

This alarming increase points to the need for more effective control techniques that can bring the costs of EWM control to a manageable level. About 75 percent of our program costs are supported by private contributions from small-dollar donors, with the surrounding towns contributing about 15 percent and the rest from fundraising events. It has not been possible to tap state or federal

5/16/2024

grant sources, which are mainly limited to eradication of small, new infestations. There is little recourse for large, established infestations like that of Chateaugay Lake, even though lakes like Chateaugay provide public access that is essential to the tourism economy of the Adirondacks.

Our experience is that while hand-harvesting can be effective in reducing EWM in a limited area, the costs to effectively control a large-scale, established infestation become prohibitive. As a result, the feasibility of hand-harvesting as a control method is limited for achieving more than spot control.

We have also observed that despite repeated hand-harvesting of the same areas, EWM persists. Dive crews have noted that when a bed of mature milfoil is harvested and the surface canopy is removed, the next year the area will be full of new shoots. Despite divers' best efforts to remove the plant's entire root structure, it is rhizomous and fragments remain. As a systemic herbicide, ProcellaCOR offers a more effective treatment for truly controlling the plant's spread.

The CLF Board members, including two PhDs in biological science, have carefully reviewed the literature regarding the safety of ProcellaCOR EC. We found that it has passed the regulatory scrutiny of the US EPA, the New York State health and wildlife agencies, as well as international bodies who have found it safe for use in aquatic environments as per the established guidelines. We note that the standard concentrations for aquatic applications are well below the threshold for drinking water restrictions and that it has been used to control EWM in public drinking water supplies.

These considerations—the economics of treatment, treatment effectiveness, and safety—have led the CLF Board to view ProcellaCOR EC as a promising alternative for treating Eurasian watermilfoil in Chateaugay Lake. It offers a more cost-effective approach that is desperately needed to control Chateaugay Lake's large and growing Eurasian water milfoil infestation.
