RE: Woodward Lake sample plan; Lot 3 Woodward Lake

Dear Alan,

With respect to the Woodward Lake sample Forest Management Plan for lot 3, bush honeysuckle was noted in all the stands, on lots greater than 50 acres. For the most part it occurs in localized areas.

Where Japanese Barberry was found, it was noted. The barberry is not pervasive and was found/noted as individual plants, or very small clusters of plants. It's not bad at all.

Sincerely,

Brian Bower, CF
